(+34) 672854583

SKILLS

- **Programming Languages:** Python, Scala, SQL, Java, C#, Javascript.
- **Libraries:** Pandas, NumPy, PySpark, Boto3, google-cloud-python, SQLAlchemy, scikit-learn, Requests, BeautifulSoup y Scrapy.
- **Frameworks, Methos & Tools:** Apache Spark, Hadoop, Apache Iceberg, Delta Lake, Databricks, Hive, Jupyter, Git, GitHub, Jenkins, Airflow, PostgreSQL, AWS, GCP, ETL, ELT, Data Warehousing, Data Lake, Docker, Kafka Connect, Terraform.
- **Spoken Languages:** Spanish (native), English (advanced), Italian (basic).
- **Relevant certifications:** AWS Solutions Architect Certification (2025), AWS Cloud Practitioner Certification (2023).

EDUCATION

Autonomous University of Madrid

Master in Big Data and Data Science, 2024.

Ministry of Information and Communication Technologies & CorrelationOne DS4A

Data Scientist, 2022

ICESI University

Systems Engineer, 2019

Economics, 2019

EXPERIENCE

Senior Data Engineer, Neoris / Banco Santander

07/2024 – Present

- Lead the data engineering team, providing technical guidance and mentorship to promote best practices in data infrastructure development, management, and optimization.
- Lead the implementation of scalable architectures on AWS using EMR Serverless for large-scale data processing, S3 for data storage, and Aurora for high-availability distributed databases. Develop efficient serverless solutions with Lambda for real-time data process automation and management.
- Develop and optimize large-scale data processing pipelines with Apache Spark, using Scala and Python to execute high-performance distributed data transformations on clusters. Implement partitioning and parallel processing strategies to improve performance and reduce computation time.
- Implement advanced data management solutions in data lakes using Apache Iceberg for large-scale data organization and version control. Ensure data integrity through ACID transactions and dynamic partitioning.
- Design and maintain complex data workflows with Apache Airflow to orchestrate ETL/ELT processes, ensuring efficient and scheduled task execution, as well as monitoring and automatic failure recovery.
- Write and optimize code in Scala and Python for data processing tasks, integrating with distributed systems such as Apache Spark and Apache Iceberg. Ensure code efficiency and quality in the delivery of data-driven solutions.
 - AWS (EMR Serverless, Aurora, Lambda, S3), Apache (Spark, Iceberg, Airflow), Kafka Connect, Jenkins, Github, Datadog, Scala, and Python.

Senior Cloud Data Engineer, Neoris / Banco BBVA

04/2024 – 07/2024

- Designed and implemented a pioneering multi-cloud architecture integrating AWS and GCP through API Gateway to handle customer complaints. Developed Lambda functions in Python for ETL processing and OCR.
- Stored and managed data using Amazon S3 and DynamoDB to maintain process states and critical information, ensuring robust data integrity and availability while meeting strict network security requirements.
- Successfully integrated the architecture with external services, establishing secure connections with OpenAI on Azure through Application Gateway and mTLS. Introduced the first generative AI project within the bank, leveraging GPT-4 to automate responses based on OCR text.
- Automated and orchestrated deployments using Jenkins, ensuring smooth CI/CD workflows. Implemented monitoring solutions for efficient operations and scalability.
- Key achievements include delivering an operational architecture that met client (BBVA) requirements, ensuring secure and scalable complaint processing, and optimizing system performance through effective multi-cloud integration.
 - AWS (API Gateway, Lambda, S3, DynamoDB, CloudWatch, Parameter Store), GCP, Azure (Application Gateway), OpenAI, Bitbucket, Python, OCR (Optical Character Recognition), mTLS (mutual Transport Layer Security).

Data Engineer, Elenas Startup

03/2023 – 03/2024

- Automate data processes for the company's management areas. Using Python to create scripts that allow the construction of ETLs from the different files in the area. Use of SQL, under the PostgreSQL system, to create queries in order to find relevant information for the business, Metabase and Tableau to generate visualization dashboards and Redshift as the database from which the data can be obtained. Responsible for creating workflows and orchestration of services through Apache Airflow and version control through Gitlab.
 - Python, AWS (Redshift, S3, Glue), Gitlab, Docker, Spark, Airflow, SQL, Metabase, Dbt, MongoDB.

Data Analyst, Pragma

09/2022 – 02/2023

- Extract, process and group data from the companies Bancolombia and Familia for the digital products Tu360Compras and NosotrasOnline using Python and SQL, generating valuable information and analyzing it through Google Analytics to later generate reports through Looker Studio, which help to decision-making by marketing and management teams. Work with other teams in the company to establish better data management and reconcile multiple data sources to ensure data quality and integrity, as well as generate statistical data models for later deployment into production.
 - Python, AWS, Github, SQL, Google Analytics, Java.

Data Scientist, Correlation One

03/2022 – 07/2022

- Selected to participate in a 13-week data science Fellowship with learning facilitated through real-world data science business cases.
- Collaborated with a group of four to build a web application with Dash and that allowed to generate an early warning using data from the Bucaramanga mayor's office, the metropolitan police and the Sisben and thus visualize the neighborhoods with the greatest problems and in need of government intervention.

- Created a detailed project plan with biweekly meetings to assign deliverables and ensure timeline remained on track, received mentorship and guidance from an industry data scientist.
- Presented findings to the Bucaramanga mayor's office accompanied by a one-page datafolio using Google Slide visualizing results accessible to both technical and non-technical audiences.
 - Python, SQL, Machine Learning, Heroku, Javascript, Github.

Data Analyst FP SWL, Reckitt

01/2020 – 08/2022

- Lead and estimate quarterly and annually the income statement of the company, by projecting prices, sales costs and general expenses based on the estimated sales and production, focused on Argentina, Chile, Colombia, Peru and Ecuador.
- Control and analyze the variation of the gross margin understanding the main factors, through the analysis of changes in price, volume, mix and cost.
- Search through E2E for actions that generate savings and efficiencies in the P&L and support the marketing and sales areas with reports and perspectives for decision making using Power Bi.
- Lead the process of changing the company's reporting platform, which went from the ICE platform to the FUSION platform. Among the activities was the validation of the information and the construction of new reports for SWL through the use of SQL and Power Bi.
 - SQL, PowerBI, FUSION.

Academic Tutor, ICESI University

01/2014 – 11/2019

- Provide support to the different teachers in their university courses (Introduction to Programming, Algorithms and Programming I and II, Data Analytics)
 - R, Java, SQL, .NET, Javascript.

Database Administrator, Visual Master

07/2017 – 05/2018

- Create the structure of the database, manage the entities, relationships and information of the database, provide solutions to problems related to the database.
 - SQL.

Tutor In PYXIS project, ICESI University

01/2016 – 07/2016

- Design and generate reports through Evisions Argos that allowed the transformation of the way in which the university reported its information.
 - SQL.

COURSES & TRAININGS

AWS Solutions Architect Certification AWS, 2025.

The Complete Hands-On Introduction to Apache Airflow Udemy, 2025.

Mastering SQL using Postgresql Udemy, 2025.

AWS Serverless Framework Course Platzi, 2024

Data Engineering Program Datapath, 2024.

AWS Cloud Practitioner Certification AWS, 2023.

Introduction to Google Cloud Platform Datapath, 2023.

Spark and Scala in Databricks: Big Data and data engineering Udemy, 2023.

Apache Airflow Fundamental Course Platzi, 2023.

Apache Spark Fundamental Course Platzi, 2023.

The Complete dbt (Data Build Tool) Bootcamp: Zero to Hero Udemy, 2023.

ETL Foundation Course with Python and Pentaho Platzi, 2023.

Introduction to MongoDB Course Platzi, 2023.

Web Scrapping Fundamentals Course with Python and Xpath Platzi, 2023.

Data Engineering Course Platzi, 2023.

Introduction to AWS Course: Networks, Governance and Machine Learning Platzi, 2023.
Introduction to AWS Course: Computing, Storage and Databases Platzi, 2023.
Introduction to AWS Course: Fundamentals of Cloud Computing Platzi, 2023.
Exploratory Data Analysis Course Platzi, 2023.
Professional Course on Work Environment for Data Science Platzi, 2023.
Missing Data Management Course: Detection and Exploration Platzi, 2023.
C1 Advanced Certificate EF International Language Centers, 2022.
Diplomaed in Data Science ESAP, 2022.
Data Science for All (DS4A): Graduated with Honors Correlation One, MinTic, 2022.
Data Analytics Coderhouse, 2022.
Data Science: Python for Data Analysis 2022 Full Bootcamp Udemy, 2022.
Object Oriented Programming Course Platzi, 2022.
Python Course: Comprehensions, Functions and Error Handling Platzi, 2022.
Python Course: Virtual Environments and PIP Platzi, 2022.
Git and Github Professional Course Platzi, 2022.
Mathematics Course for Data Science: Descriptive Statistics Platzi, 2022.
Course on Mathematical Functions for Data Science and Artificial Intelligence Platzi, 2022.
Advanced Google Analytics Google Academy, 2022.
Data Visualization Course with Matplotlib and Seaborn Platzi, 2022.
Data Manipulation and Transformation Course with Pandas and NumPy Platzi, 2022.
PCAP: Programming Essentials in Python Cisco Networking Academy, MinTic, 2022.
PostgreSQL Applied to Data Science Platzi, 2022.
PostgreSQL Practical Course Platzi, 2022.
PostgreSQL Course Platzi, 2022.
Database fundamentals Course Platzi, 2022.
Data Analysis Course with Power BI Platzi, 2022.
Visualization Principles for Business Intelligence Course Platzi, 2022.
Business Intelligence: Usefulness and areas of opportunity Course Platzi, 2022.
Work environment course for data science with Jupyter Notebooks and Anaconda Platzi, 2022.
Business Analysis Course for Data Science Course Platzi, 2022.
Digital Academy Circus Street, Reckitt, 2021.
Jumpers Reckitt, 2019.
Business Intelligence and Data Transformation Coursera, 2019.
Introduction to Data Analytics for decision making ICESI University, 2018.
